PROFILE SUMMARY

Full Stack Developer with strong experience building responsive and scalable web applications using React.js and TypeScript on the frontend, and Prisma ORM with PostgreSQL on the backend. Currently contributing as a full stack developer to an enterprise healthcare engagement platform (previously frontend), with hands-on experience in Redux, TanStack Query, responsive UI development, performance optimization (code-splitting, lazy loading), database design, Git workflows, Agile/Scrum, and JIRA. Also experienced in the MERN stack (Node.js, Express.js, MongoDB, JWT, REST APIs) through personal full-stack projects. Comfortable collaborating closely with backend, QA, and design teams to ship reliable, user-focused features.

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), Redux, TanStack Query, Context API, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, Prisma ORM, REST APIs, JWT Authentication and Authorization

Databases: PostgreSQL, MongoDB, SQL, MySQL

Tools and Practices: Git, GitHub, JIRA, Agile/Scrum, Code Reviews, Postman, VS Code, IntelliJ IDEA

Other: AWS, Docker, Jenkins (exposure)

WORK EXPERIENCE

Full Stack Developer - Novastrid IT Ventures

Sep 2026 - Present

- Transitioned from frontend to full stack role on an enterprise healthcare engagement platform built for IQVIA, now owning features end to end across the UI, backend logic, and database.
- Develop and maintain backend functionality using Prisma ORM with PostgreSQL, including data modeling, schema updates, and database queries.
- Integrate frontend React.js and TypeScript components with backend services and APIs to deliver complete speaker and event management workflows.
- Participate in code reviews and follow Git-based workflows, including feature branching, pull requests, and merge conflict resolution, to help reduce code defects.
- Work within an Agile Scrum environment (daily stand-ups, sprint planning, reviews, retrospectives) and use JIRA for task tracking and bug reporting.
- Collaborate closely with backend developers, QA engineers, designers, and product owners to deliver high-quality features.

Frontend Developer - Novastrid IT Ventures

Apr 2025 - Aug 2026

- Contributed as a frontend developer to an enterprise healthcare engagement platform built for IQVIA, supporting end-to-end speaker and event management workflows.
- Developed and maintained frontend components using React.js and TypeScript, working closely with designers and backend developers to translate requirements into functional UI.
- Managed application state using Redux across multiple interconnected views and workflows.
- Improved frontend performance through code optimization, lazy loading, and code-splitting techniques to reduce load times and improve responsiveness.
- Fixed responsive design issues across screen sizes and devices, and refactored CSS/styling to improve maintainability, consistency, and overall UI quality.

Python Full Stack Developer - Shiash Info Solutions Pvt. Ltd., Chennai

Oct 2024 - Mar 2025

- Developed and maintained full-stack web applications using Python, Django, and React.js.
- Collaborated with cross-functional teams to design, implement, and deploy scalable solutions.
- Wrote and optimized backend code with Django and managed database operations using SQL and PostgreSQL.
- Built dynamic, responsive user interfaces with React.js, integrating seamlessly with backend APIs.

PROJECTS

Drift - Geospatial Journal and Interactive Map Web Application (In Progress)

GitHub: github.com/Allwin-d/Drift

Tech Stack: React 18, TypeScript, Node.js, Express.js, MongoDB, Mongoose, TanStack Query, TanStack Router, Tailwind CSS, Leaflet.js, JWT, Zod

- Architected Full-Stack Application: Built a context-aware geospatial journaling application featuring secure JWT authentication, dynamic route protection using TanStack Router, and robust server-side request validation with Zod schemas.
- Automated Context Integration: Engineered a REST API endpoint that captures client browser geolocation and automatically enriches entries server-side by fetching real-time weather data (OpenWeatherMap API) and location place names via reverse-geocoding (OpenStreetMap Nominatim API).
- Geospatial Mapping and Performance: Integrated Leaflet.js and React-Leaflet to map journal entries geographically. Leveraged MongoDB 2dsphere spatial indexing alongside $geoNear aggregation queries to optimize distance-based spatial filtering and proximity lookups.
- Client and Server State Management: Streamlined data fetching and mutation handling using TanStack Query with custom hooks, enabling automatic cache invalidations, continuous UI sync, and low-latency state updates.

Movie Catalogue Application

Live Demo: movie-catalog-application-blush.vercel.app | GitHub: github.com/Allwin-d/Movie-Catalog-Application

Tech Stack: React.js, TypeScript, Node.js, Express.js, MongoDB, TanStack Query, Tailwind CSS, JWT

- Built a full-stack Movie Catalogue application with role-based access control, where admins can manage movies and users can browse the catalogue.
- Implemented JWT-based authentication and authorization with separate Admin and User roles, securing REST API endpoints using custom middleware.
- Developed a complete REST API with Node.js and Express.js supporting full CRUD operations for movie management.
- Managed server state using TanStack Query (useQuery, useMutation) with automatic UI refresh using invalidateQueries after every data mutation.
- Built reusable React components with TypeScript for type safety, including role-based conditional rendering to dynamically display admin features.
- Deployed the frontend on Vercel and backend on Render using environment-based configuration with .env files.

Flipkart Clone - E-Commerce Web Application

Live Demo: flipkart-clone-ruby-two.vercel.app | GitHub: github.com/Allwin-d/Flipkart-clone

Tech Stack: React.js, TypeScript, Tailwind CSS, TanStack Query (React Query), Context API

- Built and deployed a production-ready e-commerce application with reusable, well-structured components using React.js and TypeScript.
- Integrated the DummyJSON REST API to display 100+ real products with dynamic routing for product detail pages.
- Implemented global cart state using Redux with localStorage persistence through a custom useLocalStorage hook.
- Built a real comments system using MockAPI with GET and POST operations filtered by productId.
- Optimized search functionality with a custom useDebounce hook, reducing unnecessary API calls by approximately 90%.
- Enhanced user experience with shimmer loading skeletons, toast notifications, and robust error handling using error boundaries.

Cyberbullying Prevention Web Application

Tech Stack: HTML, CSS, JavaScript, Python, MySQL

- Built a web app with HTML/CSS/JavaScript frontend and Python backend on WampServer, with MySQL for data storage.
- Implemented dark/light mode, admin controls, and content moderation, including managing text/image posts and user accounts.

EDUCATION

B.Tech, Information Technology - Dr. Sivanthi Aditanar College of Engineering (Aug 2019 - Apr 2023), CGPA: 7.94

HSC (Computer Science) - James Memorial Matric Hr. Sec. School (Aug 2018 - Apr 2019)

CERTIFICATIONS

Web Development Bootcamp (Mar 2024) - Built web development projects using JavaScript, React, Spring Boot, and Web3, covering frontend and backend fundamentals.

The Complete JavaScript Course (Mar 2024) - Mastered ES6+ fundamentals and modern features; built real-world projects, problem-solving, OOP, and asynchronous JavaScript with promises and async/await.

SOFT SKILLS

Communication, Problem Solving, Critical Thinking, Time Management, Creativity, Teamwork and Collaboration
